ZETTLER[®] Medical[®] 800 Lite

Growing requirements in the healthcare sector are placing a premium on intelligent and effective management systems aimed at improving service and relieving the burden on staff. Tyco is responding to this need with the Medical[®] 800 nurse call system. An intelligent, tried-and-tested care communication system, it undergoes continuous optimisation. Medical[®] 800 Lite, the "little sister" of the system, is designed for smaller applications. The system can be expanded flexibly at little expense and meets the requirements of DIN/VDE 0834.

Medical[®] 800 Lite is ideally suitable for use in

- small retirement and nursing homes,
- serviced flats,
- out-patient clinics.

Installation without tools

Like Medical[®] 800, the Medical[®] 800 Lite care communication system is based on LON[®] technology. It is straightforward to install and easy to maintain. All components are preprogrammed in the factory and the care communication system can be commissioned without the use of a programming PC or laptop.

Safe and user-friendly

The main features of Medical[®] 800 are also available in the Lite version, e.g. clear operator guidance and explicit information through clear-text displays that make operation of the care communication system easy for anyone. All patient calls remain present until they have been dealt with completely. System components are continuously monitored for possible line breaks. Data cannot be lost even if there is a power failure. There is a large selection of call types available. Ward, duty room and

corridor display panels with alphanumeric clear text display are of course standard. Interfaces for event logging on a PC and call forwarding to pager systems can be integrated.

Flexible and expandable

Medical[®] 800 Lite is the efficient and low-cost care communication system for smaller buildings. It can be easily adapted to all forms of care institution and can be converted at any time. Medical[®] 800 Lite can even be expanded with features or combined with components of Medical[®] 800. As soon as requirements on the call system change, it can be easily adapted, expanded as required or integrated into the Medical[®] 800 system.

Conclusion

Medical[®] 800 Lite, the "little sister", is a big plus for the care institution!
